Environmental Health and Safety and Emergency Management

Assessment Report Summary

7. Summary of Assessment Results with Focus on Program Improvement: Describe evidence-based changes that have taken place within the last few assessment cycles because of assessment. Statements must be supported by evidence from the assessment report(s):

Facilities Operations

Assessment Summary Report

7. Summary of Assessment Results with Focus on Program Improvement: Describe evidence-based changes that have taken place within the last few assessment cycles because of assessment. Statements must be supported by evidence from the assessment report(s):

Physical Plant continues to emphasize training for our employees in all areas and the assessment process has shown areas within our professional development program where improvements are necessary. Some internal management restructuring will ensure code compliance training. We'll also need to address our training in the area of Historic Preservation. The ongoing review of our business processes with our staff as they relate to our campus Facilities Management software will help improve our metrics and opportunities to improve our customer service. With the restructuring of our division and new leadership, we hope to bring new assessment tools into our plan going forward.

Facilities Planning, Architecture, and Engineering

Assessment Report Summary

7. Summary of Assessment Results with Focus on Program Improvement: Describe evidence-based changes that have taken place within the last few assessment cycles because of assessment. Statements must be supported by evidence from the assessment report(s):

We have completed year five of the 15-year 2012 Campus Master Plan. The plan cites 25 key projects to meet the College's space and asset renewal needs. To date, we have completed three of the 25 projects (Science & Math Building Build-Out, Hollings Science Center Renovation and Jewish Studies Addition). The Hollings Science Center was completed in this assessment period. Using the measure of 25% implementation in a 10-year span, we are on target to meet our goal. Design is well underway for another major project (Simons Center for the Arts) and planning has begun for renewals of the Stern Student Center, Craig Hall, College Lodge and an additional parking structure. We will continue to monitor our progress as well as work on a formal, documented procedure to assess updates to the Plan. We will also monitor all unanticipated opportunities, programmatic changes and shifts in programmatic priorities that may occur due to changes in economics, enrollment and internal priorities. We will continue to ensure projects submitted in the annual State Comprehensive Permanent Improvement Program (CPIP) are in accordance with priorities listed in the 2012 Campus Master Plan, barring any need changes in priorities, advancing or receding as needs and resources shift. We will continue to monitor both project budgets and schedules in order to ensure we meet or exceed our targeted goals. We have bi-monthly project review meetings to make any necessary adjustments in schedules or budgets based upon unforeseen conditions. We are currently filling a vacant Grounds Manager position and the incumbent will be charged with evaluating all landscape development plans initiated as part of capital projects to ensure that they are consistent with the College design guidelines. This position will also be asked to track maintenance activities to ensure that the campus grounds are being maintained in accordance with industry standards using best practices, and report progress to the division administration. With restructuring of our division and new leadership, we hope to bring new assessment metrics into our planning and assessment program in the future.
