College of Charleston NSSE 2010 Major Field Report Part II. Comparisons to Other Institutions BUSINESS

Comparing your students majoring in BUSINESS fields to those in BUSINESS fields at your comparison groups

Business includes the following major codes: 20 = Accounting, 21 = Business administration (general), 22 = Finance, 23 = International business, 24 = Marketing, 25 = Management, and 26 = Other business.

Frequency Distributions

NSSE 2010 Major Field Report
Part II. Comparisons to Other Institutions
BUSINESS

NSSE 2010 Major Field Report: Part II. Comparisons to Other Institutions Interpreting the Frequency Distributions

Sample

This report is based on information from all randomly selected BUSINESS students (inleuding those from census administrations) for both your institution and your comparison institutions. Targeted oversamples and other non-randomly selected students are not included.

BETWEEN Institution Comparisons on Major Group

NSSE data serve to identify institutional strengths and weaknesses in reference to selected comparison institutions, yet institution-level comparisons may not capture important variation in student engagement that can be found within key sub-populations such as major. This report displays the frequency distributions for the BUSINESS group at your institution and at your selected comparison institutions.

Variable Names

The name of each variable appears in the first column for easy reference to your raw data file.

Variables

The items from the NSSE survey appear in the left column in the same order and wording as they appear on the instrument.

Benchmark

Items that comprise the five
"Benchmarks of Effective Educational
Practice" are indicated by the following:

LAC: Level of Academic

Challenge

ACL: Active and Collaborative Learning

SFI: Student-Faculty

Interaction

EEE: Enriching

Educational Experiences

SCE: Supportive Campus Environment

Response Options

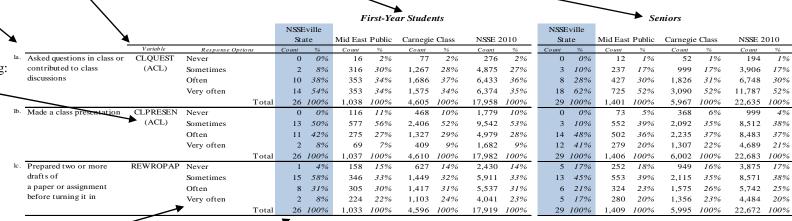

Response options listed just as they appear on the instrument.

Class

Frequency distributions are reported separately for first-year students and seniors. Insitution-reported class levels are used. Of course, <u>first-year student reports of major are likely to be unstable</u>, and interpretations of first-year results should be made with caution.

Major

Major classifications are based on recodes of the student-provided PRIMARY major (majrpcod). Major groups with fewer than five respondents in a given class are not reported. Comparison groups must contain at least three institutions with five or more respondents in the major group, or they are left blank.

Count

The Count column represents the actual number of students who responded to the particular option in each question.

Column Percentage (%)

The '%' column represents the percentage of students responding to the particular option in each question.

Weighting

All results displayed in this report are unweighted.

BUSINESS

NSSE 2010 Major Field Report: Part II. Comparisons to Other Institutions *Interpreting the Benchmark Statistics**

Benchmarks

To focus discussions about the importance of student engagement and to guide institutional improvement efforts, NSSE created five Benchmarks of Effective Educational Practice: Level of Academic Challenge, Active and Collaborative Learning, Student-Faculty Interaction, Enriching Educational Experiences, and Supportive Campus Environment.

Class

Benchmark comparisons are reported separately for first-year students and seniors. Insitution-reported class levels are used. Of course, <u>first-year student reports of major are likely to be unstable</u>, and interpretations of first-year results should be made with caution.

Major

Major classifications are based on recodes of the student-provided PRIMARY major (majrpcod). Major groups with fewer than twenty respondents in a given class are not reported. Comparison groups must contain at least three institutions with five or more respondents in the major group, or they are left blank.

Sample

This report is based on information from all randomly selected BUSINESS students (including those from census samples) for both your institution and your comparison institutions. Targeted oversamples and other non-randomly selected students are not included.

Mean

The mean is the arithmetic average of the students' benchmark scores where students answered at least 3/5ths of the benchmark items.

BETWEEN Institution Comparisons on Major Groups

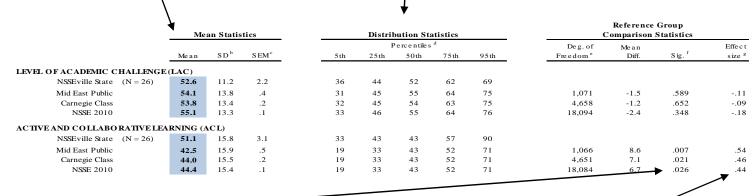

NSSE data serve to identify institutional strengths and weaknesses in reference to selected comparison institutions, yet institution-level comparisons may not capture important variation in student engagement that can be found within key sub-populations such as major. This report displays the benchmark comparisons for the BUSINESS group at your institution and at your selected comparison institutions.

Weighting

All results displayed in this report are <u>unweighted</u>.

Distribution Statistics

The dispersion of the first-year and senior benchmark scores for your institution and your selected comparison or consortium groups.

Statistical Significance

Benchmarks with mean differences that are larger than would be expected by chance alone are generally noted with one of three significance levels (p<.05, p<.01, and p<.001). The smaller the significance level, the smaller the likelihood that the difference is due to chance. Please note that statistical significance does not guarantee that the result is substantive or important. Large sample sizes (as with the NSSE project) tend to produce more statistically significant results even though the magnitude of mean differences may be inconsequential. It is recommended to consult effect sizes to judge the practical meaning of the results.

Effect Size

Effect size indicates the practical significance of the mean difference. It is calculated by dividing the mean difference by the pooled standard deviation. In practice, an effect size of .2 is often considered small, .5 moderate, and .8 large. A positive sign indicates that your institution's mean was greater, thus showing an affirmative result for the institution. A negative sign indicates the institution lags behind the comparison group, suggesting that the student behavior or institutional practice represented by the item may warrant attention.

^a Major classifications are based on recodes of the student-reported primary major field (majrpcod).

b Standard deviation is a measure of the amount the individual scores deviate from the mean of all the scores in the distribution.

^c The 95% confidence interval for the population mean is equal to the sample mean plus/minus 1.96 times the standard error of the mean.

^d A percentile is the point in the distribution of student benchmark scores at or below which a given percentage of benchmark scores fall.

^e Degrees of freedom used to compute the t-tests. Values vary for the total Ns due to the equal variance assumption.

f Statistical significance represents the probability that the difference between the mean of your institution and that of the comparison group occurred by chance.

g Effect size is calculated by subtracting the comparison group mean from the school mean, and dividing the result by the pooled standard deviation.
